

David is an experienced business executive with a passion and track record for building organizations and creating value by advancing breakthrough innovation to the marketplace. He currently serves as the Chief Innovation and Collaboration Officer for Purdue Research Foundation. In this role, David is responsible for advancing strategic innovation initiatives targeting corporate partners and key stakeholders.

David is the Founder and CEO of Zorion Medical, a leading medical device company focused on developing and commercializing fully absorbable technology utilizing bio-metals. The first set of applications target peripheral artery disease including arterial dissections, congenital vascular defects in children, and AV fistulas in renal-dialysis patients.
