

Dr. Shaun Grannis, MD MS FACMI FAAFP, is Director of the Regenstrief Center for Biomedical Informatics, Clem McDonald Scholar for Biomedical Informatics, and Associate Professor of Family Medicine at the Indiana University School of Medicine. He has provided technical and policy guidance to many organizations including the Department of Health and Human Services National Committee for Vital and Health Statistics (NCVHS), the World Health Organization, UNAIDS, the Pew Charitable Trusts and the Centers for Disease Control. Globally, Dr. Grannis collaborates with several developing countries through OpenHIE (www.ohie.org) to country-wide Health IT architecture, including establishing Rwanda's first HIE-related MPI. His recent analyses in conjunction with the Pew Charitable Trusts showed that standardizing matching variables demonstrably improves matching accuracy. Dr. Grannis' current work focuses on applying machine learning, natural language (NLP), and phenotyping methods to improve discovery, decision making, case identification and population health measurements.
